***** FIELD REPORTS *****

***** PROJECTS *****

Sopwith Camel: The roundals were recently delivered and Jim and John made quick work of getting them installed. Here is a sneak preview of the DJ Hangar pending final assembly. That splash of red might be Fokker bits! "Incoming, INCOMING; The guns are jammed Jim, GUNS? who's got the guns?"

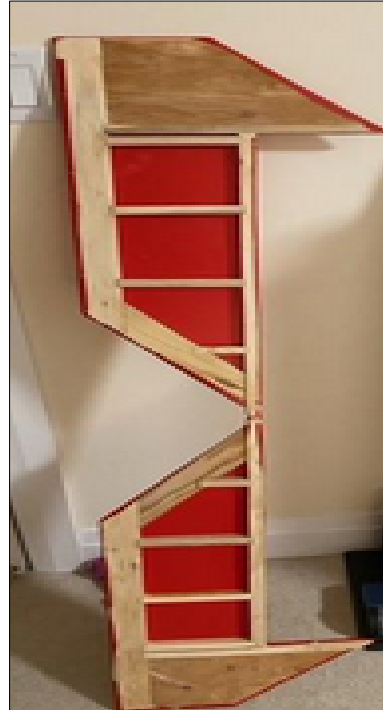

Can't you just hear that Navy type saying "Left a bit; Left a bit more".

Fergie reports it took Twenty Six, 6 feet by 30 inch rolls of plastic shrink wrap to cover the Camel. All rolls were coloured drab olive.

Fokker DR1: Show & Tell included this wing and aileron; like you'd think he'd know how it goes together! There were no takers from the floor but we do need another five. **Paul S.** cut out most of these ribs.

Sit around too long and you get painted. No sooner had the bare Fokker bits appeared in a Moday night 'show & tell', than the skinheads were on the scene adding a splash of colour to this elevator and the horizontal stabilizer. A bit like "coming; ready or not".

Here we have **Paul S.** who'd taken part in the assembly, and **John F.** the perpetrator.

Above is the Fuselage frame recently removed from it's Jig and pending final assembly. This is best man-handled by the horizontal struts as not all of the vertical ones are pegged.

BANDITS 6 O'CLOCK

Paul C. finished this lovely storage box for his grandson's chess set and board. The inside measurements are 15 3/16" square.

*The shades of distance dimly fa';
the mists of evening gather,
And hide in hazy, hopeless gloom,
Auld Scotia's hills o'heather.*

Another photograph of the **AB TOY STORE** showing the latest truck kits each with eight automobiles to load up. Go count the wheels.

***** JIGS & RULES *****

This little box was donated by **Doreen** who we happen to know from the Horticultural Society (think birdhouses). Anyways it's been given a coat of varnish and now holds a selction of small tools suitable for electronics and the like. Given a clean and tidy corner bench it might even get used.

There is a new **drum sander** on the block with an adjustable front table. TLC on the old one was taking a tad too long with so much dust gumming up the works. The new one has lots of widgets so please try hard to keep them in their place!

***** FACILITIES *****

The overhead fan near the door is now hinged a tad so it now pushes air CCW around the workshop.

***** MEMBERSHIP *****

Mike McGinnis & Bill Muncy are our newest members. To date we have twelve new members this year.

***** OUTREACH *****

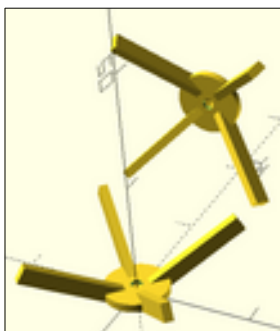

This beautiful copper clad bedding chest turned up a few weeks back looking for some TLC. It is covered in a cultural feast of first nations art from the West Coast.

***** MISCELLANEOUS *****

Upcoming breakfasts:

7:30 a.m. Tuesday 13th and 27th August
(see E for Eggs on shed sign-in sheet)

Thinking **Paul S.** might like to make the bits for the Fokker engine brace this 3D model was created using OpenSCAD. It's basically a 6" disk held behind the engine fire plate to support the 1" diameter pipe. Once the

five pieces were cut out it was assembled on a piece of ply using old set squares (orange) to support the 30 degree angles. It's a long time since these were used as such, one from Geotech (14") and the other Standardgraph (16"). The latter has dimples top and bottom to hold it off the paper for using ink pens. The Standardgraph was picked up at garage sale from a lady who had been a garden and landscape designer.

This bloodied tape was found in our front flower bed after the rains. It was previously used at the shed and still showed signs of blood all the way up to 87". Doug and I must have been measuring the length of the fuselage when I foolishly let it retract.
